How the Hydraulic Glide Suspension Works

Unique hydraulic glide suspension system makes the boom wings weightless. The guide wheels activate the hydraulic system and automatically adjust for uneven terrain. Guide wheels have puncture proof tires. (optional)

Cab mounted console allows operator to adjust the precharge on the wing lift cylinders for optimal boom performance.

SIDEQUEST® FIELD SPRAYERS

1200 gallon

U.S. Patent No. 6,286,870 & 8,839,999

Extended rear axle spindle mount allows weight to be shifted to the rear, relieving stress on the tractor's front axle and chassis. Units will fit on tractors with or without front duals. Rear duals are required.

Easy access controls

Easy attach tank mounts

NOTE: Tractors with after market dual hubs may require different mounting bolts
Hub spacer assembly is designed for tractors with 520 or narrower rear tractor tires
Front fenders need to be removed on most models
Factory setup is standard for 3-point frame and boom assembly
Not applicable on tractors with mid frame hydraulics and front 3-point
All factory setup units are tested to 90 PSI. 15" nozzle spacing available by special order.

Features

- Two 600 gallon tanks with 16" fillwells, molded sight gauge, large centered drainage sump and high volume jet agitator
- Tanks are mounted longitudinal for superb visibility
- Tank mounting brackets deliver excellent front to rear weight distribution ratio (25% front; 75%rear) and optimal row crop spraying clearance
- 3 point 80/90' hydraulic front fold boom with leveling linkage and shock absorbers to soften the ride. Live hydraulic control block requires only one set of remote outlets to perform all boom functions
- Boom can be folded to spray in a 60' or an unfolded 80/90' width.
- Unique hydraulic glide suspension system makes the boom wings weightless (see page 15 for details)
- Quick & easy - 3-point (category II or III) rear mount hookup with quick couple plumbing and jack stands for easy installation and removal
- Easy access control panel - makes easy work of preparation, refilling and clean-up
- 100 gallon rinse tank - thoroughly flushes entire system

Kick up Feature

Bar uses a center linkage with two cylinders attached. One cylinder is for folding and the second is for wing "Kick Up". This feature "kicks" the wings up 8 degrees to avoid knocking crops down when turning on headlands.

SPRAY TIPS COMPONENTS

WIDE ANGLE FLAT SPRAY TIPS AND NOZZLES
FLOODJET® TIPS AND NOZZLES

FloodJet® tips and nozzles project a wide angle spray pattern. They are designed for incorporating herbicides into the soil. These tips are recommended for suspension and slurry type chemicals at lower spraying pressures. Floodjet® tips produce coarser particle sprays to minimize drift. Boom heights should be adjusted to obtain the overlap which provides the most uniform distribution. Optimum coverage is achieved by overlapping adjacent spray patterns 50% on each side to obtain double coverage. TK floodjet® tips are available in brass or stainless steel with VisiFlo color coding. KSS floodjet® nozzles are available in stainless steel. Fits into 07790 cap assembly.

Flat spray tips 80 & 110 degree SERIES

Flat spray tips can be used for spraying herbicides, insecticides, fertilizers and other chemicals. Each tip produces a tapered edge spray pattern for uniform coverage where patterns overlap. Tips having an 80 degree spray pattern are available in brass, stainless steel, extended range color coded nylon with stainless steel orifice. Nozzle spacing is 20" and spray height is 17" to 19".

Fits into 07787, 07788 or 07789 cap assemblies.

Technical Information

Useful Formulas

$$\text{GPM (Per Nozzle)} = \frac{\text{GPA} \times \text{MPH} \times \text{W}}{5,940}$$

$$\text{GPA} = \frac{5,940 \times \text{GPM (Per Nozzle)}}{\text{MPH} \times \text{W}}$$

GPM — Gallons Per Minute

GPA — Gallons Per Acre

mph — Miles Per Hour

W — Nozzle spacing (in inches) for broadcast spraying
— Spray width (in inches) for single nozzle, band spraying or boomless spraying.

Row spacing (in inches) divided by the number of nozzles per row for directed spraying.

Measuring Travel Speed

Measure a test course in the area to be sprayed or in an area with similar surface conditions. Minimum lengths of 100 and 200 feet are recommended for measuring speeds up to 5 and 10 mph respectively. Determine the time required to travel the test course. To help ensure accuracy, conduct the speed check with a loaded sprayer and select the engine throttle setting and gear that will be used when spraying. Repeat the above process and average the times that were measured. Use the following equation or the table below to determine ground speed.

$$\text{Speed (mph)} = \frac{\text{Distance (ft)} \times 60}{\text{Time (seconds)} \times 88}$$

7.0 lbs. per gallon	.84	.92
8.0 lbs. per gallon	.96	.98

Tips Don't Last Forever!

There is sufficient evidence that spray tips may be the most neglected component in today's farming...yet they are among the most critical of items in proper application of valuable agricultural chemicals.

For example, a 10 percent overapplication of chemical on a twice-sprayed 1000-acre farm could represent a loss of \$2,000-\$10,000 based on today's chemical investments of \$10.00-\$50.00 per acre. This does not take into account potential crop damage.

Demco

We've been time tested and proven...

Back in 1950, Robert Dethmers started Dethmers Manufacturing Company in a corner of an implement dealership. One of his first products was fertilizer application equipment for the agricultural industry.

Today, as Demco continues to grow, our tradition of building quality products, employing talented, industrious people and providing attentive service remains. Our sales staff along with our dealers and distributors across the United States, Canada and the world carry on the standard.

Meeting the challenges and opportunities of changing times has produced growth in product lines. Our products are engineered and constructed with the best of materials and the latest in manufacturing technology, then tested beyond recommendations, pushing the product to its limit before the Demco name goes on. Our reputation was built on quality and dependability and we continue by being tougher on the product than the consumer.
